Mycoplasma Removal Agent (MRA)

The best solution to rescue your cells from mycoplasma contamination!

Working with human cell lines requires perfectly aseptic conditions, and often cultures get contaminated by different pathogens. Presence of mycoplasma can literally alter all cellular processes, hence the need for 100% removal. MRA is a quinolone-based antibiotic that specifically inhibits Mycoplasma DNA gyrase, an essential enzyme for microorganism replication.

- **Quick:** 7 days are enough to eliminate a wide variety of mycoplasma strains.
- **Efficient:** 100% removal after treatment.
- **Specific:** Inhibits mycoplasma DNA gyrase, MRA's cytotoxicity is null.
- **Effortless:** Simply add MRA to your standard cell culture media.

Cat. No.	Description	Pack Size
093050044	MRA – Mycoplasma Removal Agent	5 mL

For many years, MP Biomedicals has been the leading supplier of MRA. This reagent has been trusted and widely used by researchers worldwide for its excellent performance.
